### Research Summary

Chip On Flex (COF) is an advanced semiconductor packaging technology that involves directly bonding a semiconductor chip onto a flexible printed circuit (FPC) or flexible substrate. COF technology is particularly suited for applications where space-saving and high-density interconnects are essential. The process involves attaching the chip to the flexible substrate using precise alignment and micro-bump bonding techniques, enabling reliable electrical connections between the chip and the FPC. COF packages are thin, lightweight, and flexible, making them ideal for use in small and slim electronic devices like smartphones, tablets, and wearable devices. The flexibility of the substrate allows COF packages to be bent, twisted, or curved, providing design flexibility and durability in applications where mechanical stress or bending is common. COF technology provides high-performance and cost-effective solutions for integrating semiconductor chips into flexible and space-constrained electronic systems.

The major global manufacturers of Chip On Flex (COF) include LGIT, Stemco, Flexceed, Chipbond Technology, CWE, Danbond Technology, AKM Industrial,
