Research Summary

A chip package, also known as a semiconductor package or IC package, is a protective enclosure that houses a semiconductor chip or integrated circuit (IC) to protect it from external elements and provide electrical connections for interfacing with other components or circuitry. Chip packages play a crucial role in the semiconductor industry as they ensure the reliability, functionality, and thermal performance of the semiconductor devices. The package provides a secure environment for the delicate chip, shielding it from moisture, dust, and mechanical stress. It also facilitates the connection of the chip's electrical terminals to external circuits, allowing the IC to communicate and interact with other parts of the electronic system. Chip packages come in various forms and sizes, including leaded packages, ball grid arrays (BGAs), quad flat packages (QFPs), and flip-chip packages, each designed to meet specific requirements for different applications. The choice of chip package is determined by factors such as the chip's size, thermal considerations, electrical characteristics, and the intended use of the semiconductor device.

The major global suppliers of Chip Package include ASE Group, Amkor Technology, JCET, Siliconware Precision Industries, Powertech Technology, TongFu Microelectronics, Tianshui Huatian Technology, UTAC, Chipbond Technology, Hana Micron, OSE, Walton Advanced Engineering, NEPES, Unisem, ChipMOS, Signetics, Carsem, King Yuan ELECTRONICS, etc. The global players competition landscape in this report is divided into three tiers.
