Research Summary

A chip resistor is a small, surface-mount passive electronic component used to limit or control the flow of electric current in electronic circuits. It is a type of fixed resistor, meaning its resistance value is predetermined and cannot be adjusted. Chip resistors are typically made from a resistive material, such as carbon, metal film, or thick-film, and are encapsulated in a rectangular ceramic or polymer package with metal terminals on each end. These resistors come in various standard sizes and resistance values, making them widely compatible with automated assembly processes on printed circuit boards (PCBs). The primary function of chip resistors is to provide precise and stable resistance values in electronic circuits, helping to regulate current flow, set voltage levels, and protect components from excessive current. They are commonly used in various electronic devices, including computers, smartphones, consumer electronics, and automotive applications, where their small size and reliable performance are essential for modern electronics.

The major global manufacturers of Chip Resistor include Vishay, KOA, Susumu, Viking

Tech, Panasonic, Yageo, Walsin Technology, Bourns, TE Connectivity, Samsung Electro-Mechanics, Ta-I Technology, UniOhm, Ralec Electronics, Ever Ohms, Rohm, Fenghua Advanced Technology, Tateyama Kagaku Industry, Elektronische Bauelemente GmbH, etc. The global players competition landscape in this report is divided into three tiers.
