Research Summary

Chloromethane, also known as methyl chloride, is a colorless, flammable gas with the chemical formula CH_3Cl . It is a halogenated hydrocarbon and one of the simplest members of the group of chlorinated methane compounds. Chloromethane is produced industrially through the reaction of methane with chlorine gas or hydrogen chloride. It is primarily used as a raw material in the production of various chemicals, including silicone polymers, refrigerants, and pharmaceuticals. Additionally, chloromethane is used as a solvent in laboratories and as a blowing agent in foam production. While it has various industrial applications, chloromethane poses health and environmental risks, and its use is regulated due to its potential impact on the ozone layer and as a greenhouse gas. As a result, there has been a shift towards using more environmentally friendly alternatives in some applications.

The major global manufacturers of Chloromethane include AkzoNobel, KEM ONE, INEOS, Dow Chemical, Tokuyama Corporation, Shin-Etsu Chemical, AGC Chemicals, Occidental Chemical, Gujarat Alkalies and Chemicals, SRF, Ercros, Jinling Group,
