Research Summary

Chlorosulphonated Polyethylene (CSM), also known as Hypalon, is a synthetic rubber derived from polyethylene through a chlorination and sulphonation process. This unique chemical modification enhances the material's resistance to chemicals, ozone, weathering, and UV radiation, making it highly durable and suitable for various applications in challenging environments. CSM exhibits excellent mechanical properties, flexibility, and flame resistance, making it ideal for applications in industries such as automotive, construction, marine, and electrical. It is commonly used in the production of seals, gaskets, hoses, conveyor belts, and other components that require resistance to harsh conditions and exposure to chemicals. Additionally, CSM's resistance to degradation by fuels and oils makes it a popular choice for fuel hoses and gaskets in automotive applications. Its versatility, durability, and chemical resistance have made Chlorosulphonated Polyethylene a valuable material in many industrial sectors, contributing to its widespread use in a variety of specialized applications.

The major global manufacturers of Chlorosulphonated Polyethylene (CSM) include Tosoh, Jilin Petrochemical, Jiangxi Hongrun Chemical, Weifang Polygrand Chemical, etc. The global players competition landscape in this report is divided into three tiers.
