Research Summary

Chocolate is a popular sweet treat made from cocoa beans, which are the seeds of the cacao tree (*Theobroma cacao*). The process of making chocolate involves roasting and grinding the cocoa beans to produce cocoa nibs, which are then ground into a paste called chocolate liquor. The chocolate liquor is further processed to separate cocoa solids from cocoa butter. Depending on the type of chocolate being produced, different amounts of cocoa solids, cocoa butter, sugar, and milk solids may be added. Dark chocolate contains a higher percentage of cocoa solids and little to no milk solids, giving it a more intense and slightly bitter flavor. Milk chocolate includes milk solids and has a sweeter taste, while white chocolate is made from cocoa butter, sugar, and milk solids but contains no cocoa solids. Chocolate is a beloved treat enjoyed in various forms, including bars, truffles, candies, and hot beverages, and its popularity spans cultures worldwide.
