### Research Summary

Cholesterol is a waxy, fat-like substance found in the cells and tissues of the human body and many animals. It is an essential component of cell membranes, playing a crucial role in maintaining their structure and function. Cholesterol is also a precursor for the synthesis of various hormones, including sex hormones (such as estrogen and testosterone) and hormones that regulate metabolism and stress responses (such as cortisol). The body produces cholesterol in the liver, and it is also obtained from dietary sources, mainly from animal-based foods like meat, eggs, and dairy products. Cholesterol is transported through the bloodstream in lipoprotein particles, including low-density lipoprotein (LDL) and high-density lipoprotein (HDL). LDL is often referred to as 'bad cholesterol' because high levels of it can lead to the buildup of plaque in arteries, increasing the risk of heart disease. In contrast, HDL is known as 'good cholesterol' because it helps remove cholesterol from the bloodstream and has a protective effect against heart disease. Maintaining a healthy balance of cholesterol levels is essential for overall health and is often achieved through a balanced diet, regular exercise, and, if necessary, medication.

The major global manufacturers of Cholesterol include Dishman, NK, Nippon Fine Chemical, Zhejiang Garden, Anhui Chem-bright, Tianqi Chemical, etc. The global players competition landscape in this report is divided into three tiers.
