### Research Summary

Chromatography reagents, also known as chromatography solvents or eluents, are chemical substances used in chromatographic analysis to facilitate the separation, identification, and quantification of components in complex mixtures. These reagents are critical in various chromatographic techniques such as high-performance liquid chromatography (HPLC), gas chromatography (GC), and thin-layer chromatography (TLC). Chromatography reagents act as the mobile phase in the chromatographic system, responsible for carrying the sample through the stationary phase, which can be a column, a solid support, or a thin layer on a plate. The selection of appropriate chromatography reagents depends on the specific application and the type of chromatography being used. Different reagents are chosen based on their polarity, volatility, and compatibility with the sample and the stationary phase, aiming to achieve optimal separation and resolution of the components of interest. Common chromatography reagents include various solvents, buffers, acids, and bases, which play a crucial role in achieving accurate and reliable results in chromatographic analysis across various scientific and industrial fields.

The major global manufacturers of Chromatography Reagents include MilliporeSigma, Thermo Fisher Scientific, Avantor Performance Materials, VWR International, Kanto Chemical, TCI, Tianjin Concord Technology, ITW Reagents, ChengDu Chron Chemicals, FUJIFILM Wako Pure Chemical, Sinopharm Chemical Reagent, Tedia, Spectrum Chemical, Columbus Chemical Industries, Thomas Baker (Chemicals) Pvt, Spectrochem, etc. The global players competition landscape in this report is divided into three tiers.
