### Research Summary

Chromic acid, also known as chromium trioxide or chromic anhydride, is a powerful and highly reactive chemical compound with the molecular formula  $\text{CrO}_3$ . It is a dark red, crystalline solid or an orange-red solution when dissolved in water. Chromic acid is a strong oxidizing agent and is widely used in various industrial applications, including metal finishing, cleaning and etching metals, and in the production of other chemicals. In metal finishing, chromic acid is used for the anodizing of aluminum and for the preparation of certain plating baths, imparting corrosion resistance and improving surface adhesion. It is also used in laboratories for cleaning glassware and in organic synthesis as an oxidizing reagent. Due to its corrosive and toxic nature, chromic acid poses safety and environmental hazards, and its use is regulated in many countries. Alternative methods and less hazardous substances are increasingly being used to replace chromic acid in various applications to minimize its impact on health and the environment.

The major global manufacturers of Chromic Acid include LANXESS South Africa, Soda Sanayii, Elementis, MidUral Group, Novotroitsk Plant of Chromium Compounds,
