### Research Summary

Citric Acid Anhydrous is a dry, crystalline form of citric acid that is produced by removing the water molecules from citric acid through a drying process. It is a natural, weak organic acid found in citrus fruits and is widely used in the food and beverage industry as a flavor enhancer, acidity regulator, and preservative. Citric Acid Anhydrous is highly soluble in water and has a tart, sour taste, which makes it a popular ingredient in various food and beverage products like soft drinks, candies, and baked goods. In addition to its culinary applications, it is used in the pharmaceutical, cosmetic, and cleaning product industries for its acidic and chelating properties.
