Research Summary

Clad steel plate is a type of composite steel plate that consists of two or more layers of different metals or alloys bonded together to create a single integrated plate. The primary purpose of using clad steel plates is to combine the beneficial properties of each metal, such as high strength, corrosion resistance, and heat resistance, to meet specific engineering requirements. The outer layer, known as the cladding material, is typically a corrosion-resistant alloy, such as stainless steel, nickel alloy, or titanium, which provides excellent resistance to environmental degradation. The inner layer, called the base material, is typically carbon steel or low-alloy steel, which provides the required mechanical strength and support. Clad steel plates are widely used in industries like oil and gas, chemical processing, shipbuilding, and aerospace, where they are employed in pressure vessels, heat exchangers, storage tanks, and other critical applications. These plates are carefully manufactured through processes like explosive welding, roll bonding, or hot rolling, ensuring strong metallurgical bonding and optimal performance in demanding environments. The versatility and performance of clad steel plates make them valuable components for creating durable and cost-

effective solutions in various industrial sectors.

The major global manufacturers of Clad Steel Plate include Nobelclad, TISCO, Energometall, Nanjing Baotai, Dalian Shipbuilding, Voestalpine, JSW, JFE, Nippon Steel, Shandong Baode Metal, Jiangsu Debei, Sichuan Jinglei, Xian Tianli, Western Metal Materials, etc. The global players competition landscape in this report is divided into three tiers.
