Research Summary

Clean fine coal refers to coal that has undergone a process of beneficiation to remove impurities and reduce its ash and sulfur content, resulting in a higher-quality and cleaner coal product. The beneficiation process involves various methods, such as crushing, screening, and washing, to separate the coal from its impurities, including rocks, minerals, and other materials. The aim of producing clean fine coal is to improve its combustion efficiency and reduce harmful emissions when used in power plants and industrial processes. Clean fine coal is characterized by its lower ash and sulfur content, making it more environmentally friendly and less detrimental to air quality compared to traditional raw coal. By producing clean fine coal, the coal industry can play a role in mitigating the environmental impact of coal use while still making use of this abundant and valuable energy resource.

The major global manufacturers of Clean Fine Coal include Peabody, Arch Coal, Anglo American, RWE AG, BHP Billiton, Alpha Natural Resources, SUEK, Shenhua Group, Xishan Coal Electricity Group, Yanzhou Coal Mining, Datong Coal Group, China
