### Research Summary

Climbing half ropes are a type of climbing rope used in traditional (trad) climbing and multi-pitch climbing scenarios. Unlike single ropes, half ropes are sold in pairs and are designed to be used together, with each rope clipped separately to different pieces of protection. The use of two ropes provides added safety in case of a fall, as it reduces rope drag and minimizes the risk of rope cutting over sharp edges. Climbers can choose to alternate clipping each rope or use both ropes simultaneously when protection is far apart or during traverses. This technique allows for greater flexibility and reduces the impact force on the climber and anchors in case of a fall. Half ropes are particularly useful in challenging and wandering routes where rope management is crucial. Climbers should be proficient in handling and managing half ropes to ensure safe and efficient climbing experiences.
