### Research Summary

Clinical digital pathology is a field of medicine that involves the digitization and computer-based analysis of pathology specimens such as tissue samples, slides, and images for diagnostic, research, and educational purposes. In traditional pathology, specimens are examined using a microscope by pathologists to identify abnormalities and make diagnoses. With digital pathology, these specimens are scanned to create high-resolution digital images, which can then be viewed, analyzed, and interpreted using specialized software on computer screens. This digital transformation enables pathologists to access and share images remotely, collaborate with colleagues, and apply advanced image analysis techniques such as machine learning and artificial intelligence for more accurate and efficient diagnosis. Clinical digital pathology offers numerous benefits, including improved workflow efficiency, enhanced diagnostic accuracy, better communication and collaboration among healthcare professionals, and increased access to pathology expertise in remote or underserved areas. It is rapidly transforming the practice of pathology and holds great promise for improving patient care and advancing medical research.

The major global suppliers of Clinical Digital Pathology include Leica Biosystems, ZEISS, Hamamatsu Photonics, 3DHISTECH Ltd., OLYMPUS (EVIDENT), Philips, ROCHE, KFBIO, Motic, Shengqiang, Unic, Winmedic, Wisleap, etc. The global players competition landscape in this report is divided into three tiers.
