Research Summary

A closed circuit cooling tower is a heat rejection device used to cool water or other fluids in industrial and HVAC systems by transferring heat from the fluid to the surrounding air. Unlike traditional open cooling towers, where water directly contacts the air, in a closed circuit cooling tower, the process fluid circulates within a heat exchanger, which is enclosed and isolated from direct contact with the air. The heat exchanger is typically made of coils or tubes, through which the fluid flows, while air is drawn across the heat exchanger to cool the fluid through indirect heat transfer. This design helps minimize water loss due to evaporation, reduces the potential for contamination, and prevents the spread of harmful microorganisms, making closed circuit cooling towers more suitable for applications where water quality is crucial or where environmental factors must be controlled. Commonly used in power plants, industrial facilities, and large commercial buildings, these systems provide efficient cooling with lower water consumption and maintenance needs compared to open-loop systems.

The major global manufacturers of Closed Circuit Cooling Tower include Thermax,

Baltimore Aircoil Company, Delta Cooling Towers, EVAPCO, REYMSA Cooling Towers, Whaley Products, YU TING Refrigerator, Jeni Equipment, Harrision Cooling Tower, The Cooling Tower Company, Técnicas Evaporativas, SPX Cooling Technologies, Welltech Cooling Systems, JC Equipment, etc. The global players competition landscape in this report is divided into three tiers.
