Research Summary

A closed impeller pump is a type of centrifugal pump that utilizes a design with all impeller vanes enclosed within a metal or plastic casing, leaving no open spaces between the vanes. This closed configuration provides a more efficient and higher-pressure pumping performance compared to open impeller pumps. The closed design minimizes the risk of leakage and allows for better handling of high-pressure and high-viscosity fluids. The impeller's closed construction also makes it less susceptible to wear and damage, resulting in longer pump life and reduced maintenance requirements. Closed impeller pumps are commonly used in various industrial applications, such as water supply, chemical processing, wastewater treatment, and HVAC systems, where reliable and efficient fluid transfer is essential.

The major global manufacturers of Closed Impeller Pump include Grundfos, Flowserve, ITT, KSB, Sulzer, Ebara, Schlumberger, Weir Group, Pentair, Clyde Union, Vano, Shandong Sure Boshan, Shanghai Kaiquan, Sanlian Pump Group, etc. The global players competition landscape in this report is divided into three tiers.
