Research Summary

Cloud print is a technology that allows users to print documents and files from any device, such as laptops, smartphones, and tablets, to a printer connected to the cloud. Instead of relying on a direct connection to a printer, cloud print services enable users to send print jobs to the cloud, where the documents are stored temporarily until they are retrieved and printed by a cloud-connected printer. This allows for greater flexibility and convenience, as users can print from anywhere with internet access without the need for specific printer drivers or direct physical connections. Cloud print is particularly useful in modern work environments, where employees often use multiple devices and work remotely. It also enables businesses to centralize print management and reduce the need for local printer installations, making printing more efficient and cost-effective. Popular cloud print services include Google Cloud Print and other cloud-enabled printer manufacturers' proprietary solutions.

The major global suppliers of Cloud Print include Google, Amazon, Microsoft, Baidu, Aliyun, VMWare, HP, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command
