### Research Summary

A Compressed Natural Gas (CNG) ISO tank container is a specialized transportable vessel designed for the safe and efficient transportation of compressed natural gas. The ISO tank container is built to the specifications set by the International Organization for Standardization (ISO), ensuring its compatibility with various transportation modes, such as road, rail, and sea. The container is constructed using high-strength materials and features a robust design to withstand the high pressure of compressed natural gas, typically ranging from 250 to 5000 psi. Inside the container, the CNG is stored in compressed form, allowing for a higher gas volume to be transported in a compact and safe manner. CNG ISO tank containers are commonly used for long-distance transportation of natural gas to fueling stations, industrial facilities, and remote areas where access to natural gas pipelines is limited. Their versatility and standardized design make them a cost-effective and reliable solution for the distribution of clean and eco-friendly compressed natural gas.
