Research Summary

Compressed Natural Gas (CNG) vehicles are automobiles or other transportation vehicles that use natural gas as their primary fuel source. These vehicles are specially designed or converted to run on CNG, which is stored in high-pressure tanks on board. CNG is a cleaner-burning fuel compared to gasoline or diesel, emitting fewer harmful pollutants and greenhouse gases, making CNG vehicles more environmentally friendly. The CNG fuel system typically includes a pressure regulator that reduces the gas pressure to a level suitable for the engine's requirements. CNG vehicles are popular in various applications, including buses, trucks, and passenger cars, particularly in regions where natural gas is abundant and readily available. They offer a viable alternative to traditional fossil fuel-powered vehicles, contributing to reducing air pollution and dependence on petroleum-based fuels. However, the adoption of CNG vehicles is often limited by the availability of refueling infrastructure and the initial cost of conversion or manufacturing.

The major global manufacturers of CNG Vehicles include Fiat Chrysler, Volkswagen,

Ford, General Motors, Toyota, Iran Khodro, Nissan, Volvo Group, Hyundai, Honda, Suzuki, Renault, Mercedes-Benz, PSA Peugeot Citroen, Great Wall Motors, etc. The global players competition landscape in this report is divided into three tiers.
