Research Summary

A CO2 gas sensor is a device designed to detect and measure carbon dioxide (CO2) levels in the air. It is used in various applications, including indoor air quality monitoring, ventilation control, and environmental monitoring. The sensor operates based on the principle of infrared absorption or chemical reaction, depending on the sensor's technology. Infrared CO2 sensors measure the amount of infrared light absorbed by CO2 molecules, while chemical CO2 sensors rely on a chemical reaction between CO2 and a specific material to generate an electrical signal. The sensor provides real-time data on CO2 concentration, allowing users to monitor and control indoor air quality and ensure adequate ventilation. High levels of CO2 can indicate poor ventilation, which can lead to discomfort, reduced productivity, and health issues. Therefore, CO2 gas sensors play a vital role in creating healthier and more comfortable indoor environments while also contributing to energy efficiency by optimizing ventilation systems.

The major global manufacturers of CO2 Gas Sensor include Amphenol Corporation, Siemens AG, Honeywell, Sensirion AG, Murata, Vaisala, ELT SENSOR, Cubic Sensor,
