### Research Summary

Coal tar creosote is a type of wood preservative that is derived from the distillation of coal tar. It is a dark, oily liquid that contains a mixture of chemicals, including polycyclic aromatic hydrocarbons (PAHs), phenols, and other organic compounds. Coal tar creosote is widely used for the treatment of wood to protect it from decay and insect damage, making it suitable for outdoor applications like railroad ties, utility poles, and fence posts. However, due to its toxic and carcinogenic properties, its use has become regulated in many countries. Proper handling, application, and disposal practices are necessary to prevent environmental contamination and protect human health. As a result, alternative wood preservatives with lower environmental and health risks are being sought to replace coal tar creosote in modern wood treatment practices.
