Research Summary

Coal water slurry (CWS) is a mixture of finely ground coal particles and water. It is a liquid fuel alternative to traditional solid coal, designed to improve the efficiency of coal transport and utilization. The coal particles in CWS are ground to a very fine size, allowing for better suspension in water, creating a fluid with properties similar to heavy oil. CWS has several advantages, including easier transportation through pipelines, reduced emissions, and improved combustion efficiency. It can be used in various industrial applications, such as power generation, heating, and as a fuel for boilers and furnaces. However, to use CWS as a fuel, specialized equipment is required to handle and burn the slurry properly. Additionally, proper storage and handling are essential to prevent settling of the coal particles over time. Despite its advantages, CWS production and utilization require careful consideration of environmental and safety factors to ensure its sustainable use as an energy source.

The major global manufacturers of Coal Water Slurry include Datong Huihai, Mao Ming Clean Energy, EET GmbH, MeiKe Clean New Energy, 81 LiaoYuan, Sanrang Jieneng,
