Research Summary

Coater and developer equipment for large-size OLED (Organic Light Emitting Diode) production are advanced manufacturing tools used in the fabrication of OLED displays. The coater is responsible for applying organic materials, such as emissive and charge transport layers, onto a substrate, while the developer removes unwanted parts of these layers to create the desired pattern. This process is essential in the production of OLED panels used in large-screen applications like TVs, monitors, and signage. The coater and developer systems ensure precise and uniform material deposition, enabling high-resolution and high-quality displays. As OLED technology continues to evolve and demand for larger displays grows, these specialized equipment play a crucial role in efficiently producing large-size OLED panels with enhanced brightness, contrast, and color reproduction, contributing to the advancement of the display industry.
