Research Summary

Coating thickness gauges, also known as paint thickness gauges or coating thickness meters, are handheld devices used to measure the thickness of coatings applied to various surfaces. They are essential tools in industries such as automotive, aerospace, construction, and manufacturing, where the thickness of coatings, such as paint, varnish, or plating, is critical to product quality and performance. The gauges use non-destructive testing methods, such as magnetic induction or eddy current, to determine the thickness of the coating without damaging the underlying substrate. By accurately measuring coating thickness, these gauges help ensure compliance with industry standards, prevent overuse or underuse of coating materials, and maintain product integrity and corrosion protection. Coating thickness gauges come in various models, with different measurement ranges and capabilities to accommodate a wide range of applications and materials.

The major global manufacturers of Coating Thickness Gauges include DeFelsko Corporation, Elcometer, Helmut Fischer, Hitachi High-Tech, Extech, ElektroPhysik,
