Research Summary

Coatings are substances applied to the surface of materials to enhance their appearance, protect them from corrosion, improve their performance, or provide specific functionalities. They can be found in various forms, such as liquid paints, powder coatings, varnishes, and films. Coatings are widely used in industries like automotive, aerospace, construction, electronics, and manufacturing, as well as in everyday applications like home decor and personal care products. Different types of coatings offer diverse properties, including UV resistance, waterproofing, anti-scratch, anti-corrosion, heat resistance, and decorative finishes. The development of advanced coatings, such as nanocoatings and smart coatings, has further expanded their applications, allowing for self-healing, temperature-regulating, or antimicrobial properties.
