Research Summary

Coaxial agitators, also known as dual-shaft agitators, are a type of mixing equipment used in various industrial processes. They consist of two coaxial shafts, with one shaft placed inside the other. The outer shaft remains stationary, while the inner shaft rotates. This design allows for the simultaneous rotation and counter-rotation of the agitator blades, resulting in a unique mixing action that provides efficient and uniform blending of liquids and solids. Coaxial agitators are commonly used in applications where gentle agitation is required, such as in the pharmaceutical, food and beverage, and cosmetic industries. They are particularly effective for mixing shear-sensitive materials or for incorporating powders into liquids. The speed and configuration of the agitator blades can be adjusted to meet specific process requirements, making coaxial agitators versatile and reliable tools for achieving consistent and homogeneous mixing results.

The major global manufacturers of Coaxial Agitators include EKATO GROUP, UTG Mixing Group, INOXPA, RVT System, KASAG Swiss AG, Link Industrial, Diaf Pilvad, GMM Pfaudler Ltd, STC-Engineering GmbH, FLUKO Shanghai Equipment Co,
