Research Summary

Coaxial switches are electronic devices used in RF (radio frequency) and microwave systems to selectively connect or disconnect different signal paths. They are designed to switch signals between multiple coaxial transmission lines, allowing users to control the routing of RF signals within the system. Coaxial switches come in various configurations, such as single-pole single-throw (SPST) or single-pole double-throw (SPDT), and can be operated manually, electrically, or remotely via a control system. These switches are widely used in telecommunications, wireless communication, satellite communication, military and defense applications, and other industries where precise signal routing and switching capabilities are necessary to optimize the performance and functionality of complex RF systems. Coaxial switches offer low insertion loss, high isolation, and excellent reliability, making them crucial components for managing RF signal flow in demanding and sensitive applications.

The major global manufacturers of Coaxial Switches include Dow-Key, Ducommun, Radiall, Keysight, EPX, Panasonic, Teledyne, Hirose Electric, Tesoel, Charter, etc. The
