Research Summary

COB (Chip on Board) photo light refers to a type of LED (Light Emitting Diode) technology used in lighting fixtures and devices. In COB technology, multiple LED chips are mounted directly onto a substrate to form a single, compact lighting source. The close proximity of the LED chips allows for better heat dissipation and higher lumen output compared to traditional LED lights. COB photo lights produce a uniform and intense light output, with no visible individual diode points, making them ideal for applications that require high brightness and smooth light distribution. They are commonly used in photography and video lighting equipment, as well as in various indoor and outdoor lighting fixtures, such as spotlights, downlights, and floodlights. COB photo lights are known for their energy efficiency, long lifespan, and excellent color rendering properties, making them a popular choice for professional and amateur photographers, videographers, and lighting designers.

The major global manufacturers of COB Photo Light include COLBOR, Tolifo, PIXEL, Shenzhen Nice Photographic Equipment, Aputure, NanLite, Jinbei, Godox, Arri, Falcon
