### Research Summary

Cobalt-60, also known as Co-60, is a radioactive isotope of cobalt with the symbol  $^{60}\text{Co}$ . It is produced through the neutron activation of natural cobalt-59 in nuclear reactors or particle accelerators. Cobalt-60 is widely used in various applications, including industrial radiography, radiation therapy for cancer treatment, and gamma irradiation for sterilization of medical equipment and food products. In radiation therapy, cobalt-60 is encapsulated in a medical device known as a teletherapy machine or ?cobalt bomb,? which emits high-energy gamma rays to target and destroy cancerous cells. It is also used for measuring and calibrating radiation doses in medical and industrial settings. Despite its beneficial applications, cobalt-60 poses significant health and safety hazards due to its radioactivity, requiring strict regulatory controls and safety measures during handling and storage.

The major global manufacturers of Cobalt-60 include Bruce Power, Rosatom, China National Nuclear Corporation, Eckert & Ziegler, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry
