Research Summary

A coil detachment controller is a specialized device used in medical imaging procedures, particularly in interventional radiology and endovascular surgeries. It is designed to control the detachment of detachable coils used in procedures such as embolization. Detachable coils are tiny metallic devices used to block blood flow in specific blood vessels to treat aneurysms, vascular malformations, and other conditions. The coil detachment controller allows the interventional radiologist or surgeon to precisely release the coil from the delivery catheter and position it at the targeted site. The controlled detachment ensures that the coil is securely placed in the desired location to achieve effective occlusion of the blood vessel and prevent complications. Coil detachment controllers play a critical role in ensuring the success and safety of endovascular procedures, allowing for accurate and controlled placement of the detachable coils to achieve optimal patient outcomes.

The major global manufacturers of Coil Detachment Controller include Terumo, Penumbra, Stryker, Johnson & Johnson, Shape Memory Medical, Visec
