Research Summary

Coiled tubing services are a specialized form of well intervention used in the oil and gas industry. It involves the deployment of a continuous, flexible, and long metal tube (coiled tubing) into oil and gas wells to perform various operations. The coiled tubing is spooled onto a large reel and can be pumped into the well while still attached to the surface equipment, enabling real-time control and data acquisition during the operation. Coiled tubing services are utilized for a wide range of applications, including well cleanouts, acid stimulation, nitrogen lifting, milling and drilling, fishing, and well logging. The advantages of coiled tubing services include reduced well intervention costs, faster and safer operations, and the ability to perform operations in live wells without having to shut them down. This technology has become a crucial tool in maintaining and enhancing the productivity of oil and gas wells, especially in mature fields where traditional workover methods might be more challenging or costly.

The major global suppliers of Coiled Tubing Services include Schlumberger, Halliburton, Baker Hughes (GE), Weatherford, Superior Energy, Archer, Calfrac Well Services,
