Research Summary

Cold box resin is a type of synthetic resin used in the cold box process of making molds for metal castings. It is a two-part system consisting of a liquid resin and a gaseous catalyst. When the resin and catalyst are mixed together, a rapid chemical reaction occurs, leading to the hardening of the resin. This cured resin forms the mold cavity, which is used to shape the molten metal during casting. Cold box resin has excellent binding properties and can withstand high temperatures, making it suitable for creating molds for various metals like iron, steel, aluminum, and bronze. Its quick curing time and ability to produce intricate and precise mold details make it a preferred choice in foundries and manufacturing industries where high-quality and complex metal castings are required. Additionally, cold box resin molds exhibit good dimensional stability, contributing to the overall efficiency and success of the metal casting process.

The major global manufacturers of Cold Box Resin include ASK, HA, Jinan Shengquan, Kao Chemicals, Suzhou Xingye, Mancuso Chemicals, Foseco, Eurotek, etc. The global players competition landscape in this report is divided into three tiers. The first tier
