Research Summary

Cold cathode X-ray tubes are a type of X-ray tube that operates without the need for heating the cathode to emit electrons, unlike traditional hot cathode X-ray tubes. In cold cathode X-ray tubes, electrons are emitted from the cathode through various mechanisms such as field emission or secondary emission induced by high voltage. These tubes are typically used in portable X-ray devices, such as dental X-ray machines, where rapid startup and shutdown times are desirable. Cold cathode X-ray tubes offer advantages such as longer lifespan, reduced power consumption, and simplified design compared to their hot cathode counterparts. They find applications in medical imaging, non-destructive testing, security screening, and industrial quality control, where reliable and compact X-ray sources are required.

The major global manufacturers of Cold Cathode X-ray Tubes include Vatech, VSI, Micro-X, HAO ZHI, CAT Beam Tech, etc. The global players competition landscape in this report is divided into three tiers.
