Research Summary

Cold compression devices are medical devices designed to provide therapeutic treatment for various injuries and conditions by combining cold therapy and compression. They are commonly used to reduce pain, swelling, and inflammation in muscles, joints, and soft tissues after injuries, surgeries, or during recovery from intense physical activities. The device typically consists of a flexible wrap or sleeve that can be applied to the affected area, and an integrated system that circulates cold water or a gel pack to deliver cooling to the injured site. The compression feature allows the device to apply gentle pressure, which helps to control swelling and enhance the effectiveness of cold therapy. Cold compression devices are widely used in sports medicine, orthopedics, and rehabilitation settings, providing a non-invasive and drug-free approach to managing pain and promoting healing in various musculoskeletal conditions.

The major global manufacturers of Cold Compression Devices include Coolsystems (Game Ready), DJO Global, BREG, ?ssur, ThermoTek, PowerPlay, Bio Compression
