Research Summary

A cold heading machine is a specialized type of metal forming equipment used in the manufacturing industry to shape metal wire or rod into specific components such as bolts, screws, and other fasteners. The cold heading process involves feeding the metal material into the machine, where it is gripped by a set of dies. The machine applies high pressure to the metal, causing it to take the shape of the dies and form the desired part. Cold heading machines are designed to work at room temperature, hence the term 'cold' heading. This process is highly efficient and allows for high-speed production of precision parts with minimal material waste. Cold heading machines are widely used in various industries, including automotive, construction, and electronics, where the demand for high-quality fasteners is essential for product performance and reliability.

The major global manufacturers of Cold Heading Machine include Hatebur, Asahi Sunac Corporation, National Machinery LLC, Siijn Intelligent Forming Machinery, NEDSCHROEF Machinery, Chun zu, YESWIN, Sakamura, Ningbo Haixing Machinery, Sacma Group, Shixi Enterprise, Nakashimada, Tanisaka Iron Works Ltd., Harbin
