### Research Summary

Cold planers, also known as asphalt milling machines or road planers, are heavy-duty construction machines used for removing old and damaged asphalt or concrete surfaces from roads, highways, and other paved areas. They feature a large rotating drum equipped with cutting teeth that grind and remove the surface material. As the cold planer moves forward, the drum cuts into the pavement, effectively milling off the top layer to a desired depth, creating a smooth and even surface. The removed material, known as reclaimed asphalt pavement (RAP), can be recycled and used in new asphalt mixes. Cold planers are essential in road maintenance and construction projects, as they allow for precise and efficient removal of damaged surfaces, improving road safety and extending the life of roadways. They come in various sizes and configurations to accommodate different project requirements, and advanced models may include GPS and laser-guided systems for enhanced accuracy and control.

The major global manufacturers of Cold Planers include WIRTGEN, Caterpillar, Bomag, SAKAI HEAVY INDUSTRIES, XCMG, Dynapac, RoadTec, Sany, CMI Roadbuilding, Liugong Machinery, Shantui, XGMA, etc. The global players competition landscape in
