Research Summary

A cold plate is a specialized cooling device used to dissipate heat from electronic components and other heat-generating devices. It consists of a flat, thermally conductive metal plate with internal channels or passages through which a cooling fluid, such as water or refrigerant, is circulated. When the hot components come into contact with the cold plate, heat is transferred to the cooling fluid, which carries it away from the components. The cooling fluid then releases the absorbed heat into the surrounding environment through a heat exchanger. Cold plates are commonly used in electronics, power electronics, and high-performance computing applications where traditional air cooling may not be sufficient to dissipate the heat generated by high-power components. They offer efficient and localized cooling, ensuring optimal temperature control and performance of critical electronic systems.

The major global manufacturers of Cold Plate include Aavid, Lytron, Asia Vital Components, Wakefield-Vette, Wolverine Tube, Columbia-Staver, Ellediesse, TAT Technologies, DAU, TE Technology, Wenxuan Hardware, Kawaso Texcel, Hitachi, Suzhou Wint Electric, Tucker Engineering, Shanghai Kissthermal, MaxQ Technology,

Mikros, HS Marston, etc. The global players competition landscape in this report is divided into three tiers.
