Research Summary

Collaborative computing is a form of computing where multiple individuals or groups work together to achieve a common goal, leveraging the power of distributed resources and expertise. This collaboration can occur in various forms, such as sharing computational resources, data, or software tools across networks or platforms. Examples of collaborative computing include distributed computing projects like SETI@home, where volunteers donate idle computing power to analyze radio signals from space, or collaborative software development platforms like GitHub, where developers collaborate on code projects. Cloud computing services also facilitate collaborative computing by providing shared resources and tools for teams to work together on projects. Collaborative computing enables greater efficiency, scalability, and innovation by harnessing the collective intelligence and resources of diverse participants.

The major global suppliers of Collaborative Computing include Microsoft, Google, Cisco, HCL Technologies, Zoom, Salesforce, Atlassian, Citrix, Smartsheet, Asana, Cybozu,
