Research Summary

A collagen sponge is a biomedical material made from collagen, a protein naturally found in the skin, bones, and connective tissues of animals, including humans. The collagen used in these sponges is typically derived from sources such as bovine (cow) or porcine (pig) skin or bones. Collagen sponges are widely used in medical and surgical applications due to their biocompatibility, biodegradability, and ability to promote tissue regeneration. These sponges are often used as scaffolds or matrices for tissue engineering, wound healing, and regenerative medicine purposes. When implanted in the body, collagen sponges provide a temporary structure that supports cell migration, proliferation, and new tissue formation, aiding in the healing process. They can also be impregnated with growth factors, antibiotics, or other therapeutic agents to further enhance their biological effects and promote specific tissue regeneration outcomes. Collagen sponges have applications in various medical fields, including orthopedics, dentistry, plastic surgery, and wound care.

The major global manufacturers of Collagen Sponge include Johnson & Johnson, BD (C
