Research Summary

A combined air handling unit (AHU) is a specialized HVAC (heating, ventilation, and air conditioning) system that efficiently manages the supply, circulation, and conditioning of air in a building or facility. It combines the functions of multiple individual units, such as heating, cooling, dehumidification, and ventilation, into a single integrated system. The combined AHU is equipped with fans, filters, coils, and dampers to control the temperature, humidity, and air quality within the space it serves. The unit works by drawing in outside air, filtering and conditioning it as necessary, and then distributing it throughout the building through a network of ducts. This type of system is commonly used in large commercial and industrial buildings, hospitals, educational institutions, and other spaces where precise control over indoor air conditions is essential for occupant comfort and health. The integration of various functions into a single unit makes the combined AHU more energy-efficient and cost-effective compared to using separate systems for each function.

The major global manufacturers of Combined Air Handling Unit include Jonson Control,

Harbin Air Conditioning, Trane, Hisense, McQuay, Suzhou Sujing Bush Refrigeration, HUACHUANG, Mammoth, Guangdong Shenling Environmental Systems, Gree, EUROKLIMAT, LG, DunAn, Holtop, Dongguan Tech Free, Shandong GRAD Group, KINGAIR, etc. The global players competition landscape in this report is divided into three tiers.
