### Research Summary

Commercial satellite broadband is an internet service that utilizes geostationary or low-earth orbit satellites to provide high-speed internet access to businesses, organizations, and remote locations where traditional wired internet infrastructure is limited or unavailable. It offers a reliable and fast internet connection through satellite signals transmitted and received by satellite dishes installed at the user's location. This technology enables businesses and enterprises in rural or underserved areas to access essential online services, cloud applications, video conferencing, and other bandwidth-intensive activities crucial for their operations. Commercial satellite broadband serves as a viable alternative to terrestrial internet connections and offers a practical solution for businesses with remote or geographically dispersed operations, facilitating efficient communication, data sharing, and productivity regardless of their physical location.

The major global suppliers of Commercial Satellite Broadband include Hughes (EchoStar), ViaSat, Inmarsat, ST Engineering iDirect, Newtec Cy N.V., Eutelsat, Iridium Communications, Thaicom Public, Bigblu Broadband, Gilat Satellite Networks, etc. The
