### Research Summary

A commercial use air curtain is a specialized device designed to create an invisible barrier of air across open doorways or entrances in commercial buildings. It works by generating a controlled and continuous stream of air, usually from top to bottom, that separates the indoor and outdoor environments. These air curtains are commonly used in various commercial establishments, such as retail stores, supermarkets, restaurants, and industrial facilities, to prevent the loss of conditioned air and the entry of dust, insects, odors, and pollutants from outside. By maintaining a consistent indoor climate and minimizing the exchange of air between the two environments, commercial air curtains can improve energy efficiency, reduce heating and cooling costs, enhance customer comfort, and promote a cleaner and more hygienic interior space. They are available in different sizes and configurations to suit the specific needs of various commercial applications and can be installed above doorways, windows, or other openings for optimal performance.
