Research Summary

Common Mode Choke Coils (CMCC) are passive electronic components used to suppress electromagnetic interference (EMI) in electrical circuits. They consist of two coils wound on a single core, with the winding directions of the coils opposing each other. This configuration creates a high impedance to common mode noise, which is the interference that appears on both signal lines in a transmission system. CMCCs are commonly used in electronic devices and equipment to reduce EMI and ensure signal integrity, particularly in applications involving data communication, power supplies, motor drives, and audio circuits. By effectively filtering out common mode noise while allowing the differential mode signals (the desired signals) to pass through, CMCCs help improve the overall performance and reliability of electronic systems.

The major global manufacturers of Common Mode Choke Coils (CMCC) include Murata, YAGEO (Chilisin), TDK, TAIYO YUDEN, Cyntec, Sunlord Electronics, Vishay, TAI-TECH Advanced Electronic, Sumida, Eaton, Schaffner, TABUCHI ELECTRIC, Laird
