Research Summary

Common Mode Chokes (CMCs) are electrical components used to suppress common mode noise in electronic circuits and systems. They consist of two coils wound on a magnetic core, with the winding directions opposing each other. This configuration creates a high impedance to common mode signals while allowing the passage of differential mode signals. Common mode noise is a type of interference that appears simultaneously on both signal lines in a transmission system, and it can negatively affect the performance and reliability of electronic devices. CMCs help mitigate this noise, reducing electromagnetic interference (EMI) and improving the overall functionality of electronic equipment. They are commonly used in applications like data communication, power supplies, motor drives, audio circuits, and other systems where EMI mitigation is crucial.

The major global manufacturers of Common Mode Chokes include Murata, TDK, Chilisin, TAIYO YUDEN, Cyntec, Sunlord Electronics, Vishay, TAI-TECH Advanced Electronic, Sumida, YAGEO Corporation, Schaffner, Eaton, Laird Performance
