### Research Summary

A commutator is a crucial component used in certain types of electric motors and generators. It consists of a rotating cylindrical assembly made of copper segments or bars, insulated from each other by mica or other materials. The commutator is mounted on the shaft of the motor and is responsible for reversing the current direction in the coils of the motor's armature as it rotates. This reversal of current direction ensures that the magnetic fields in the motor change accordingly, leading to continuous rotation of the motor's shaft. Commutators are mainly found in direct current (DC) motors, where they enable the conversion of alternating current (AC) from the power source into a unidirectional current that powers the motor, providing efficient and reliable mechanical motion.

The major global manufacturers of Commutator include Kolektor, Huarui Electric, Kaizhong, Angu, Sugiyama, Great Wall, Friedrich Nettelhoff, Lifeng, Suzhou Kegou, Electric Materials, TRIS, Takachiho, MAM, Toledo, etc. The global players competition landscape in this report is divided into three tiers.
