Research Summary

Complex inorganic color pigments (CICPs) are a type of pigment used in various industries, including paints, coatings, plastics, ceramics, and cosmetics, to impart color to products. Unlike organic pigments derived from carbon-based compounds, CICPs are composed of inorganic compounds, typically metal oxides or mixed metal oxides. These pigments exhibit high color strength, excellent lightfastness, chemical stability, and heat resistance, making them suitable for demanding applications where durability and color retention are essential. CICPs are known for producing vibrant and long-lasting colors, including shades of red, yellow, blue, green, and brown. They are often used in combination with organic pigments and additives to achieve desired hues, effects, and performance characteristics in various products. Additionally, CICPs can offer advantages such as non-toxicity, inertness, and compatibility with stringent regulatory requirements, making them a preferred choice for industries where safety and environmental considerations are paramount.

The major global manufacturers of Complex Inorganic Colour Pigments include The Shepherd Color Company, Heubach, TOMATEC, Hanil, Oxerra, Vibrantz, Asahi Kasei Kogyo, Fulln Chemical, Inco Industria Colori, Hunan Jufa Pigment, Cadello, Zhonglong Materials, Ultramarine & Pigments Limited, Jolychem, Noelson Chemicals, Hangzhou Epsilon Chemical, Hangzhou Aibai Chemical, Nantong Hermeta Chemicals, Shanghai Jingcheng, etc. The global players competition landscape in this report is divided into three tiers.
