### Research Summary

Composite cylinders are lightweight, high-pressure containers used for storing various gases and liquids. These cylinders are constructed using a combination of composite materials, such as carbon fibers and high-strength resins, which offer superior strength-to-weight ratio compared to traditional metal cylinders. The use of composites allows for significant weight reduction, making them easier to handle and transport. Composite cylinders are commonly used in industries like aerospace, scuba diving, firefighting, and medical applications, where portability and high-pressure storage are crucial. They are designed to meet strict safety standards and are resistant to corrosion, making them a reliable and durable solution for various storage and transportation needs.

The major global manufacturers of Composite Cylinders include Luxfer Gas Cylinder, Hexagon Composites, Sinoma, Aburi Composites, Faber Industrie, Worthington Cylinders, Dragerwerk, Santek, Time Technoplast, Rubis Caribbean, Beijing Tianhai Industry, Ullit, etc. The global players competition landscape in this report is divided into three tiers.
