Research Summary

Composite insulated panels are construction materials consisting of two outer layers, typically made from metal or other rigid materials, and a core insulating material sandwiched between them. The core insulation can be made from various materials, including polyurethane foam, polystyrene, or mineral wool. The combination of the rigid outer layers and the insulating core creates a panel that offers excellent thermal efficiency, sound insulation, and structural strength. Composite insulated panels are widely used in the construction industry for walls, roofs, and floors of buildings and industrial facilities. They provide a cost-effective and time-efficient solution for creating well-insulated and weather-resistant structures. These panels are known for their lightweight nature, ease of installation, and ability to improve the energy efficiency of buildings, making them an attractive choice for modern construction projects.

The major global manufacturers of Composite Insulated Panels include Kingspan, Metecno, Isopan, NCI Building Systems, TATA Steel, ArcelorMittal, Romakowski, Lattonedil, Ruukki, Omnis Exteriors, Silex, Isomec, GCS, Zhongjie, AlShahin, Nucor
