Research Summary

Composite pipes are a type of piping system made from a combination of materials that offer enhanced strength, durability, and resistance to various environmental factors. Typically, these pipes are constructed by layering different materials such as metal, plastic, or fiberglass, with the inner layer often made from a corrosion-resistant material like polyethylene or epoxy and the outer layer designed for added structural strength. Composite pipes are widely used in applications like plumbing, gas distribution, oil and gas transportation, and industrial processes due to their lightweight nature, high resistance to corrosion, and ability to withstand high pressure and temperature variations. They are also valued for their flexibility, ease of installation, and longer lifespan compared to traditional metal or plastic pipes.

The major global manufacturers of Composite Pipes include National Oilwell Varco (NOV), TechnipFMC, AMIBLU, Farassan, Future Pipe Industries (FPI), Baker Hughes, SoluForce, Strohm, Jiangsu Shunlong, Jiangsu Zhongxin, Jiangsu New Sunshine, Lianyungang Zhongfu Lianzhong, etc. The global players competition landscape in this
