Research Summary

Composite rebar and wire are innovative construction materials that offer superior performance compared to traditional steel reinforcement products. Composite rebar is made by reinforcing a polymer matrix, usually epoxy resin, with fibers such as glass, carbon, or basalt. Similarly, composite wire is produced using a similar process, but in a wire form. These materials provide exceptional strength, corrosion resistance, and durability, making them ideal for various construction applications. They are lightweight, making transportation and handling easier, and their non-metallic nature makes them non-conductive and suitable for structures in corrosive or electromagnetic-sensitive environments. Composite rebar and wire are increasingly used in critical infrastructure projects, bridges, marine structures, and buildings, contributing to improved sustainability and longevity of construction projects while reducing maintenance costs over their service life.

The major global manufacturers of Composite Rebar and Wire include Aslan FRP, Schoeck, Armastek, Galen, Dextra Group, FiReP, BP Composites (TUFF-Bar), Pultrall,

Pultron Composites, Hubei Yulong, Fusite, Fiberline, Marshall Composite Technologies, Sireg Geotech, Technobasalt, Kodiak Fiberglass Rebar, Captrad, Tribeni Fiber, B&B FRP Manufacturing Inc, Neuvokas Corporate, Mateenbar, Nycon, SFTec Inc, Nanjing Fenghui Composite, Yuxing, Shanghai KNP, etc. The global players competition landscape in this report is divided into three tiers.
